Abstract (en)

[origin: WO03006750A1] A reinforcing cage (3) is introduced into a previously dug foundation ditch and a tube (1) is fixed thereto, said tube being able to be destroyed by impact and able to constitute a sealing joint at one end of said foundation ditch. The tube is destroyed by an excavating tool when an adjacent foundation ditch is dug. The drawing represents the unit created by the cage (3) and the tube (1) fixed thereto. The invention can be used to create reinforced concrete moulded walls in the ground.
