Abstract (en)

[origin: FR2827419A1] An acoustic panel comprises an embossed metal sheet (1) with a low rate of perforations against a layer (2) of porous acoustic absorbent material. The panel is erected at a distance from a supporting wall or machine housing. The perforations in the sheet metal are in the form of regularly-spaced slits, made to give a resistance to the passage of air of 500-3300 N s/m<3>.
