Abstract (en)

[origin: WO03004816A1] The invention relates to a method and a device for opening and closing a part (10) which can be rotated or tilted on a vehicle, especially a door (60) of a hinged window, a boot lid, an engine bonnet (12) or a folding roof. According to the invention, the part (10) is displaced between a closed position and an open position, and when the part (10) is open and/or closed, obstructions (30) are detected and the displacement of the part (10) is stopped or reversed by means of a control unit (28).
