Abstract (en)
[origin: WO03006776A1] A universal support for a rolling up curtain is aimed at being fastened, together with another identical support (100), to a surface (1) for holding opposite heads (93) of a rolling roll (91) of a rolling up curtain (90). The support (100) includes an upright (3) of polygonal section and a bracket (4) extending from the upright (3), in cantilevered fashion with respect to the surface (1). The bracket has, at its distal portion (4b), a seat (5) for receiving and holding the head (93). The terminal portions (30, 40) feature front holes (31, 41) and lateral holes (32, 42) for allowing the universal support (100) to be fastened to different surfaces (1). Other fastening means (80) are made on the upright (3) and include "L"-like grooves (81, 82) aimed at assembling the support (100) on a section bar (85). A diagonal strengthening bar (60) is also situated between the distal portion (4a) of the bracket (4) and the upright (3).
