Abstract (en)

[origin: EP1408149A2] The drum is rotatably mounted in a washing medium container, has a hollow cylindrical casing and two covering surfaces, an opening in the casing or one covering surface for receiving a wash and scoop ribs on the inside of the casing forming one-piece components of the casing and at least approximately parallel to the drum's axis. The scoop ribs have a trough-shaped surface contour that is closed on all sides as far as outlet openings. The drum is rotatably mounted about a horizontal axis in a washing medium container, has a hollow cylindrical casing (1.1) and two covering surfaces, an opening in the casing or one covering surface for receiving a wash and scoop ribs (3) on the inside of the casing forming one-piece components of the casing and at least approximately parallel to the drum's axis. The scoop ribs have a trough-shaped surface contour that is closed on all sides as far as outlet openings. AN Independent claim is also included for the following: (a) a washing machine (b) and a method of manufacturing a washing machine drum.
