Abstract (en)

[origin: EP1408163A2] A stabilizer (64) mounted to one frame segment is made to assume either a work or transport position. The stabilizer lifts one set of wheels (22) while other set of wheels (20) remain in contact with the ground when assuming a work position. Each wheel set extends from a respective frame segment (14,16). A linear actuator (24) extends between segments to articulate the segments relative to one another. An Independent claim is also included for an operating method for work vehicle.
