Abstract (en)
[origin: WO03004008A2] The object of the present invention is a pharmaceutical composition for oral use, in the form of hard gelatin capsules, which contains an excipient from the triglyceride class, for example atomized glyceryl palmitostearate, with double role, of lubricant and binder. The composition is used for the treatment and prophylaxis of calcium metabolism disorders, such as bone resorption, hypercalcemia and osteoporosis and contains as active ingredient a derivate of bisphosphonic acid, for example disodium clodronate. The active ingredient disodium clodronate tetrahydrate, granulated by fluidized bed method, is released from the preparation in a proportion of at least 75 % during the first 5 minutes and at least 95 % in 30 minutes.
