Abstract (en)

[origin: WO0230474A1] The present invention provides means, whereby the treatment of intraperitoneal cancers in mammals, including ovarian cancer, can be improved, intraperitoneal administration of cytotoxic medical agents or immunoconjugates being utilized. By substantially reducing the level of extracorporeal removal the level of cytotoxic medical agents or immunoconjugates in body fluids the organ exposure of circulating cytotoxic agents is minimized, whereby the invention offers opportunities to use more effective dose treatment regimes.
