Abstract (en)

[origin: WO0103980A1] The invention relates to an electronic control device for monitoring the operation of safety devices comprising at least one detection and transmission unit (1) and a reception unit (2), each detection and transmission unit (1) being connected to said reception unit (2) by means of a communication channel (3), said at least one detection and transmission unit (1) comprising a data processing electronic device (4) having at least one sensor (5) connected thereto and positioned on the safety device to be monitored in order to ascertain the correct utilisation thereof, said reception unit (2) comprising a data processing electronic circuit (7) adapted to drive one or more optical and/or acoustical signal generators (8).
