Abstract (en)
[origin: DE10135543A1] The drive and control method uses at least one impeller (5) for providing a propulsion water jet which is deflected by guide surfaces (11,26,27,47,30) to allow sideways and reverse movement. A crash-stop function is initiated by at least one sensor using the distance from a collision object, with a control (98) providing automatic lowering of a deflection cap providing braking via reverse propulsion. An Independent claim for propulsion drive and control device for a water vehicle is also included.
