Abstract (en)  
[origin: WO03011715A1] A folding-box for cigarettes is designed so that the box lateral walls (18, 19) and top lateral walls (23, 24) consist of two sides that form an angle with one another thus being somewhat roof-like. The shape of the cross-section of the packaging results while adapting to the packaging contents, namely to a group of cigarettes in which a middle row has a greater number of cigarettes than both outer rows.
