Abstract (en)

[origin: WO03010262A1] The invention relates to performance improved dish washing machine detergents. Said detergents provide improved washing performance even when a smaller dosage is used at a lower temperature and for a shorter period of washing time. Like traditional dishwashing machine detergents ("cleaners"), the inventive detergents can be produced in both powder or granular form or in a tablet or pourable form as well as in the form of a combined product (a "2 in 1" product which washes and rinses, or as a "3 in 1" product, which washes, rinses, and replaces salt), containing 0.1 - 50 wt. % of one or more non-ionic surfactants which have a viscosity (Brookfield, Spindle 31, 30 U/min, 20 DEG C) of less than 450mPas in an 80 wt. % of solution in distilled water.
