Abstract (en)
[origin: WO03002793A1] A false twist texturing machine, for the false twist texturing of several synthetic fibres, in several processing stations is disclosed. Each processing station comprises several regulating units and a winding device. Several supply units, a heating device, a cooling device and a false twist unit are essentially embodied as the regulating units, whereby one of the supply units is a drawing supply unit for drawing a thread from a feed spool. According to the invention, an inlet module is provided for housing the drawing supply unit, on which several housing units for additional process units for guiding and treating a thread or several threads are embodied. Said false twist machine can thus be applied to the production of crimped standard yarn or effect yarn.
