Abstract (en)
[origin: WO0186183A1] The present invention relates to a cable for supplying chemicals to, and for the control of, a sub-sea hydrocarbon well comprising an external pressure pipe (31) enclosing a number of smaller pipes (32, 33), the cable having the special features that the external enclosing pipe (31) forms a channel for the hydration inhibiting agent and in addition forms an element that takes up mechanical tension in the cable, protects the internal pipes (32, 33) against radial forces and forms a nearly corrosion free environment protecting the smaller, internal pipes (32, 33).
