Abstract (en)

[origin: WO0180091A2] A system for providing redirection addresses for a wireless web access device is disclosed. The wireless web access device is coupled to a navigation control unit that includes user controls, such as buttons. A navigation server coupled to the wireless web access device via a network (e.g., the Internet), receives signals identifying the navigation control unit and one of the user controls actuated by a user. In response thereto, the navigation server accesses a database to identify a redirect address, and provides such address to the wireless web access device. Also disclosed are methods, data structures, and display descriptions associated with the navigation server.
