Abstract (en)

[origin: WO0229766A2] The invention relates to a frame panel system (1) for suspending sliding panels that comprise a frame (8) and a fabric covering (6) or a board (6'). The panels can be freely displaced with respect to one another in parallel, thereby producing color effects or optical effects. The panels are movably received in a guide rail (2) by means of a special fixture (3). The inventive system is mainly used for window decorations, blackout panels and sun protection devices, as well as for room dividers and sliding elements for paneling shelves, wardrobes, cupboards or niches.
