Abstract (en)

[origin: WO0184675A1] The invention concerns a device for extracting a male electric plug with respect to a female electric plug characterised in that it comprises: an independent and removable support member (1) provided with fittings to be adapted on part of the male body; the support member (1) being equipped, with articulating capacity, with an element (2) acting as a lever and capable of co-operating in support with part of the female plug to bring about, by a tilting effect, the extraction of the male plug from said female plug without tearing the latter.
