Abstract (en)

[origin: WO03013064A1] The invention relates to a method for safeguarding the establishment of a user channel connection in a telecommunication network, which is characterized in that the user channel connection is established via a packet-oriented data network (42) between a first and a second media gateway (36, 38) and in that a first call feature server (44) controlling the at least first media gateway (36) is provided.
