Abstract (en)

[origin: WO02098040A2] The invention relates to a system for connecting a data receiver (1) to at least two information provider resources (5,6) via at least one data transfer network (4), consisting of a connection platform (3) comprising a computer-based server (7) and information storage means (8), said data receiver (1) comprising at least one terminal adapted for information exchange on the data transfer network. The data transfer network is characterised in that it is a computer network, whereby at least two resources work according to different information exchange protocols: also characterised in that the connection platform (3) comprises multi-protocol connection means adapted to connect said data transfer network (1) and said two resources (5,6) regardless of the information exchange protocol being used.
