Abstract (en)  
[origin: WO03001772A2] Preferred embodiments enable cell phone users to plug in a novel SIM card and receive a multimedia broadcast of their choice, television, celebrity broadcast calls, newspapers, games, video and the like, without initializing with a service provider. Adapters can provide additional cell phone communication channels enabling a user to talk on the phone while receiving a broadcast into storage or to quickly receive a broadcast over multiple channels. Cell phone TV flicker can be inhibited by receiving over multiple channels. Each channel can be controlled or activated by its own SIM card. Novel product-specific SIM cards are provided to enable reception of specific broadcasts.  
[origin: WO03001772A2] Preferred embodiments enable cell phone users to plug in a novel SIM card (34) and receive a multimedia broadcast of their choice, television, celebrity broadcast calls, newspapers, games, video and the like, without initializing with a service provider. Adapters can provide additional cell phone communication channels enabling a user to talk on the phone while receiving a broadcast into storage or to quickly receive a broadcast over multiple channels (3, 4, 5, 6, 7). Cell phone TV flicker can be inhibited by receiving over multiple channels (3, 4, 5, 6, 7). Each channel can be controlled or activated by its own SIM card (34). Novel product-specific SIM cards are provided to enable reception of specific broadcasts.
