Abstract (en)

[origin: US2002162170A1] Motor-driven, adjustable supporting device for the upholstery of seating and/or reclining furniture, e.g. a mattress or a bed, has a first supporting part and at least a second supporting part for the support of a mattress over its surface. The first supporting part and the second supporting part are jointly connected to one another and are pivotable relative to one another by a drive. The drive may have at least one electromotive drive which is disposed on the first supporting part in such a way that an output element of the drive is disposed between an upper limiting plane and a lower limiting plane of the first supporting part.
