Abstract (en)
[origin: EP1410749A2] A food press (10) is provided having a presser arm (100) and a presser plate (150) which is received by a basket (250) formed in a handle, and a pivotally attached perforated strainer plate (260) is locatable within the basket. The strainer plate is pivotally attached to the handle at a point which is at a side of the basket opposite a hinge which pivotally attaches the handle to the presser arm. The food press provides for the pivoting of the strainer plate from a first position in the basket, where the food article may be pressed against the strainer plate, and a second position exposing the upper surface and lower surface of the strainer plate for easy access and cleaning of the perforated strainer plate.
[origin: EP1410749A2] A food press (10) comprises pressure arm (100), pressure plate (150), handle (200), basket (250) for receiving the pressure plate, perforated strainer plate (260) and hinge (300). The strainer plate is removably attached to handle by a pivot member (264) that is press-fitted within a cutout portion of the handle and has an axis of rotation to position itself within the basket. An independent claim is included for cleaning a garlic press.
