Abstract (en)
[origin: EP1410827A1] The ski (1) comprises a sliding board (4) terminated by a raised end (2) comprising a peripheral zone (5) and a central zone (6). The peripheral zone extends from the board edge (9) in the direction of the end central zone and has a thickness less than that of the end central zone and is connected to it by a recess (7) forming a rupture point. The width of the peripheral zone, measured perpendicularly to the board edge increases from the start of the end to the highest point of the end.
