Abstract (en)

[origin: EP1411164A1] The method involves supplying water into the working volume (1) of the domestic machine (2) with a pump (3). The revolution rate of the pump is matched to the speed of movement of the water in the region (4) before the pump. The revolution rate of the pump is increased in an essentially linear manner from null to a maximum speed when filling the working volume. AN Independent claim is also included for the following: (a) a domestic machine, especially a dishwasher or a washing machine.
