Abstract (en)

[origin: EP1411596A2] A plug casing (PC) (14) has a flexible locking arm (FLA) (21) with a locking link (23). A plug has a slider bar (SB) (29) in a limited but adjustable on-axis position in the PC. In a locking position, the plug prevents the FLA from any excursion and releases it in any different position. Compression springs (27) supported on the PC and the SB cause the SB to return to its locking position.
