Abstract (en)

[origin: WO03008116A1] The invention relates to a method for removing deposits of solids arising from a liquid reaction mixture in a reaction device, characterized in that particles from an inert material in reaction conditions are introduced into the reaction apparatus, said particles are displaced throughout the reactor by suitable types of mechanical circulation of said reaction mixture, whereby they are knocked against the walls or other fittings and deposits thereon are removed by abrasion during said reaction.
