Abstract (en)
[origin: WO03011789A1] The invention relates to factory mortar in the form of shaped bodies. The shaped body is produced in continuously operating or discontinuously operating compression devices for non-plastic materials. The inventive factory mortar is made ready for use by mixing it with water and optionally additional binding agents. The shaped body formed from the inventive factory mortar has a high specific surface and an excellent capillary water-absorption ability enabling it to rapidly disintegrate in water. The inventive factory mortar is especially used as an adhesive for tiles, mortar for joints or as filler.
