Abstract (en)

[origin: WO03012148A2] Recombinant vector essentially consisting of: a) a plasmid component able to carry out exactly and efficiently vector replication in bacteria and viral insert expression in eukaryotic cells; b) an HIV component characterised in that the V3 portion sequence of env gene has been deleted and substituted by NruI enzyme restriction site. In addition the invention relates to a method for the genophenotypic evaluation of HIV genomic sequences.
