Abstract (en)
[origin: WO03012307A1] The invention relates to a wet or/and hydraulically-operated multiple clutch device with at least two multiplate clutch arrangements provided with or for a rotary drive arrangement, comprising at least one stator section (100), arranged, or which may be arranged, on the gearbox side and at least one rotor section (90) which rotates with the clutch device. According to the invention, the stator section may be coupled with the rotor section before the positioning of the clutch device in the drive train of a motor vehicle to form an assembly unit including the clutch device, at least one rotary drive of the rotary drive arrangement and the stator section, which may then be mounted on the gearbox side by means of placing the stator section on the gearbox housing.
