Abstract (en)

[origin: WO03062745A1] The invention relates to a method for detecting information on a tool (10), particularly for measuring a mechanical tool in a setting device (11), according to which at least one camera (12) takes pictures (13 to 17) of the tool (10) from various viewing positions. The pictures (13 to 17) are then sorted into a data structure (18) for a three-dimensional space according to the viewing position.
