Abstract (en)

[origin: WO03009039A1] The invention relates to a mirror adjusting machine, especially for laser-processing machines. According to the inventive method, a greater simplicity of construction and a more precise and fast adjustability of a mirror (16) to a desired position is achieved by securing the mirror (16) in an adjustable manner to a solid frame (10) and by arranging electric linear motors (1, 2, 3) for adjusting the mirror between the frame (10) and the mirror (16), acting upon the mirror (16) via positioning elements (18, 19).
