Abstract (en)
[origin: FR2828300A1] Method involves definition of: a set of elementary functions that can be executed in a data processing unit that is to execute the protected software; a set of elementary commands; creation of protected software by choice of an processing algorithm; and creation of software source code from the vulnerable software that is to be protected by modification of its code using the selected algorithm, with the algorithm being executed using elementary functions. The invention also relates to a corresponding system, data processing unit and assembly for distribution of protected software.
