Abstract (en)

[origin: FR2828304A1] Method for creation of protected software wherein: a processing algorithm is selected; protected source code is generated from the vulnerable source code by modifying it using the selected algorithm with an operand supplied to the executing data processing unit that implements the algorithm using said operand and provision of an output result from the unit to a data processing system. The invention also relates to a corresponding system, data processing unit and assembly for distribution of protected software.
