Abstract (en)

[origin: EP1413450A1] The single-sided printing method involves using shading corresponding to the illumination intensity distribution of an illumination device (4) for illuminating the carrier medium (8) in the operating state, with which white and/or silver pigments are applied to the side (9) of the carrier medium to be printed using the screen printing technique. The carrier medium can be directly printed or a film on the carrier medium can be printed. Independent claims are also included for the following: (a) a carrier medium for replaceable arrangement of especially transparent information media (b) and a housing with an illumination arrangement.
