Abstract (en)

[origin: WO03013232A1] An improved pet food snack and container for holding same and for providing and dispensing a combination of different pet food components, such as a dry pet food snack in combination with a highly palatable paste or sauce, is provided. The container houses separate first and second pet foods in compartments that are structurally integrated. In an embodiment, the container has a removable closure that automatically places the first and second pet foods into contact when the closure is removed. The container may be in the form of a bowl that holds the contacted first and second pet foods. The bowl is suitable for serving the contacted first and second pet foods to a pet. A pet owner can open the container and serve the contacted first and second pet foods without using any separate utensils.
