Abstract (en)
[origin: WO03011527A1] The invention relates to a system with a tool holding system which comprises a catching device (10) which connects work tool (12) to a drive shaft (14) in an active manner. Said system also comprises a work tool (12). According to the invention, the work tool (12) is actively connected to the catching device by means of at least one locking element (18) which can be displaced counter to a spring element (16). The locking element (18) is engaged in an operating position of the work tool (12) and locks the work tool (12) in a positive fit. At least one part of a means (20, 20', 30, 30', 32) used to prevent the work tool (12) from being mounted in a reverse manner is disposed on the receiving element for said tool.
