Abstract (en)

[origin: WO02070354A2] A carton is disclosed which comprises four wall panels (12, 14, 16, 18) which are bounded by crease lines (20, 22, 24, 26). A tab (28) secures the four panels into tubular form. The bottom of the carton is constituted by overlapping flaps (30, 32, 34, 36). The top of the carton is closed by further flaps (46, 48, 50, 52). The flap (52) has a removable panel (72) within the area thereof, the removable panel (72) being bounded by a weakened line (74) along which it can be detached from the flap (52). The flap (48) has an area (70) coated with pressure sensitive adhesive and an area (68) coated with glue which secures the area (68) permanently to the underlying top closure structure. The areas (68, 70) are separated from one another by a crease line (66). Once the removable panel (72) has been detached for dispensing purposes, the resultant opening can be closed by pressing the area (70) down onto the remainder of the top closure structure.
