Abstract (en)
[origin: WO02064433A2] The bottle carrier (1) according to the present invention comprises two longitudinal central sections (2) which may be used as interlocked or separately. In this manner, less bottles may be carried when required, and also their storage in the refrigerators and similar places is facilitated. These two pieces can be placed in the bottle storage compartments vertically, either as separated or as joined from their short edges, whereby the same number of bottles can be stored by occupying less space as compared to other bottle carries may also be used to open the metallic caps of the bottles.
