Abstract (en)
[origin: WO03014469A1] The invention relates to a flexible press jacket (10) for use in a shoe press roll for dewatering or smoothing a continuous fiber web. Said press jacket comprises a plastic layer (30) and a reinforcement (31, 32) embedded therein. The press jacket (10) is provided with an additional reinforcement (34) in at least one of its two end sections (E), thereby allowing to mount it on the jacket face of a rotatable support element (for example spreader ring (27)). The system for fixing the press jacket (10) on the support element (27) does not require any fastening elements associated with the jacket face.
