Abstract (en)
[origin: US6998968B2] The disclosure relates to a door handle, in particular for a motor vehicle, comprising at least one presence sensor having at least one electrode for detecting the presence of a user at said handle, wherein it comprises conducting means having at least one proximal end directly or indirectly connected by capacitive coupling to said detection electrode and at least one distal end emerging in electrical insulation on the outer surface of the handle so as to create at least one new zone for detecting the presence of a user. The invention also relates to a hands-free access system for a motor vehicle comprising such a door handle.
