Abstract (en)

[origin: WO03017576A2] The invention relates to a method and system for communicating in a wireless communications network, according to which a portable communications unit, during a connection, is connected to a stationary communications device, and communications information, which is received over the communications channel, is output to the portable communications unit. The aim of the invention is to improve the representation of the received communications information. To this end, the communications information is transmitted in the form of digitized video and audio information and the portable communications unit is connected to a second stationary communications device to which the communications information is at least partially sent and is output there.
