Abstract (en)

[origin: EP1415778A2] At least one press beam (5) can be moved independently in a direction perpendicular or parallel to a distance (17) between this beam and the other beam via a guide device (6) extending between this beam and the press frame (3). A drive device (12) is provided for applying an adjustment force (14) to this beam in a direction essentially perpendicular to the previously mentioned distance. The press (1) has at least two press beams mounted in a frame (3), at least one beam being connected to a drive device. Independent claims are also included for the following: (1) Press forming methods for making articles from compacted wood, especially solid wood; and (2) Compacted wood articles made using these methods.
