Abstract (en)
A lifting rail (15) is arranged in parallel to and vertically movable between a head rail (11) and a bottom rail (13). The lifting rail defines with the head rail and the bottom rail two vertically spaced shading sections (16,17). Positioning cords (18A,18B) are bilaterally vertically connected between the head and bottom rails and extended through the shading sections and inserted through the lifting rail. The positioning cords each have a part transversely extended through the lifting rail at a distance. Two blind bodies (19,24) are respectively provided in the shading sections and relatively extended out/received upon vertical movement of the lifting rail between the head rail and the bottom rail.
