Abstract (en)

[origin: EP1416194A2] A family of transmissions having a plurality of family members each having three planetary gearsets (20,30,40) and six torque-transmitting mechanisms. The planetary gearsets (20,30,40) and the torque-transmitting mechanisms are interconnected such that at least seven forward speed ratios and one reverse speed ratio can be established within the three planetary gearsets (20,30,40) and transmitted between an input shaft (17) and an output shaft (19), by selectively engaging the torque transmitting mechanisms in combinations of four. <IMAGE>
[origin: EP1416194A2] The power transmission group has a planetary gear arrangement (18) with three planetary gearsets (20,30,40) continuously interconnected to one another. Six torque transmitting mechanisms (50,53,54,56,58,60) are selectively engaged in combinations of four to establish seven forward speed ratios and one reverse speed ratio within the planetary gearsets for transmission between the input and output shafts (19).
