Abstract (en)

A number of M samples is used for repeatedly calculating initial calibration coefficients ($h_k(M)$), where M' is an integer which is larger than 1'. An averaged calibration coefficients ($h(M)$) is calculated by averaging the initial calibration coefficients, based on which in-phase/quadrature (I/Q) signal is corrected. Independent claims are also included for the following: (1) in-phase/quadrature modulator; (2) in-phase/quadrature modulator operation method; and (3) in-phase/quadrature demodulator.
