Abstract (en)

[origin: WO03004148A2] The invention relates to a strip, made from a sheet material, for a packing module for treatment of liquids, comprising corrugations, which are mainly oriented at an inclination to the direction of flow of said liquid, when the strip is in an approximately vertical plane with the edges thereof approximately horizontal. The strip comprises openings (44) with extended edges. The direction of the edges on the lower section of the openings and the natural direction of flow (S) of the liquid on at least 75 % of the length of the edges of said lower section form an included angle of between 0 DEG and 20 DEG . The above finds application in air distillation columns.
