Abstract (en)  
[origin: WO03006645A2] The present invention relates to methods of inhibiting heparanase activity and treating various conditions by administering to an animal an effective amount of an immunogen that elicits an immune response to heparanase. According to the present invention, the immunogen is heparanase or a fragment thereof and, preferably, the immunogen is an antigen presenting cell (APC), such as a dendritic cell (DC), displaying heparanase or a fragment thereof on the surface. The present invention also relates to compositions containing the immunogen.
