Abstract (en)
[origin: WO03016629A1] The invention relates to a method for the continuous laying of a rail (4,4') on a rigid track, in particular consisting of precast concrete components (1). According to said method, the rail (4,4') is positioned in a channel (3,3') of the rigid track and is fixed by said channel (3,3') being filled. The inventive method is characterised in that chamber filler blocks (30) are located at the sides of the rail (4,4') and the gap (32) between the chamber filler blocks (30) and the sides (34) of the channel is filled with a grouting mortar.
