Abstract (en)  
[origin: US2004188028A1] The invention relates to a device (1) for taping long objects (2) using tape (3) from a spool (4). The device (1) comprises a radial bearing ring (5) wherein a rotating inner part (6) is arranged. The radial bearing ring (5) is associated with a cut-out section (7) and the inner part (6) is associated with a radial side recess (8). On one side, the inner part (6) has a tape receiver (9) which is approximately centrally arranged and which is connected to a pendulum bearing (10) in a perpendicular manner with respect to the recess (8). The radial bearing ring (5) is selectively connected, to a handle (11) or/and to a stationary stand (12)
