Abstract (en)

[origin: EP1418033A2] The implement comprises a motorised tool constituted by a continuous track (42) provided with cutting members (54), said track being guided in order to follow a run having two overlapped parallel horizontal branches (56, 58), joined by two curved opposed return sections at 180 DEG , a front return section (60) of which is an active section able to engage the wall (W) thereby removing the material so as to form therein a seat (S) having a squared cross-section which presents a width corresponding to the width of the track (42) and an height corresponding to the distance between the external faces of the two branches (56, 58) of the track. <IMAGE>
